RED MOUNTAIN CONSULTING

Red Mountain Consulting, LLC

CAPABILITIES

Cybersecurity capabilities

Technical findings. Clear risk decisions.

We translate complex findings into a clear picture of your security risks: what could happen, how it could affect your operations, and what to address first. Technical teams get actionable detail; leaders get context to prioritize risk and make the most of limited resources.

Testing boundaries, objectives and final deliverables are agreed in the engagement scope.

OUR SERVICES

External & internal network testing

Evaluate exposed services, configurations and exploitable weaknesses from outside your organization or an agreed starting point inside the network.

Web application testing

Assess agreed application functions, authentication and access controls to understand risks to users, information and business workflows.

Wireless security assessment

Examine wireless access and configuration risks within agreed networks and locations, with findings to guide practical improvements.

Active Directory assessment

Evaluate identity configurations, privileged access and attack paths to understand how weaknesses could enable greater access or impact.

Red & purple team exercises

Explore agreed attack paths and defensive visibility. Align exercise objectives, authorized activities and defender involvement before work begins.

Remediation validation

Reassess agreed findings and affected systems after corrective work to distinguish validated fixes from issues that still need attention.

Included with every assessment

Technical outbrief with detailed Q&A

We walk through the findings, supporting evidence, potential impact and remediation guidance with you and your technical team, making space for detailed technical questions and discussion.

Separately scoped follow-up

Remediation retesting is offered as a separately scoped follow-up and is not included in the primary assessment.

Experience behind the work

Jason Hill is a retired Army National Guard Master Sergeant with 23 years of service. He served as the Branch Chief of CISA cyber assessments.
